

What is claimed is:

1. A method for managing fees of contents in which the fees arise based on a predetermined charging rule upon distributing the contents, said method comprising the steps of:

equipping information gathering means on a network with which a user terminal is allowed to connect, said user terminal carrying out information processing by utilizing said contents;

embedding digital information to said contents, said digital information causing said user terminal to transmit a contents distributing history to said information gathering means at a predetermined timing while said user terminal is connected with said network;

distributing said contents with said digital information being embedded through a predetermined distribution mechanism;

holding, by predetermined identification information holding means, identification information for identifying said distributed contents and said distribution mechanism;

counting a distribution condition of contents per distribution mechanism based on said contents distributing history gathered through said information gathering means and said identification information held by said identification information holding means; and

determining a charging amount per distribution mechanism based on said counted distribution condition and a charging rule for said contents.

2. A method for managing fees of contents in which the fees arise based on a predetermined charging rule upon utilizing the contents, said method comprising the steps of:

issuing a recording medium to a user operating a user terminal

which carries out information processing by utilizing said contents,
said recording medium having a data recording area in which user
identification data is recorded and a nonvolatile memory area;

equipping information gathering means on a network with which
5 said user terminal with said recording medium being loaded is
allowed to connect;

embedding digital information to said contents, said digital
information causing said user terminal to store a contents
utilizing history indicating utilizing condition of the contents
10 to said memory area, and to read said stored contents utilizing
history so as to transmit said contents utilizing history to said
information gathering means along with said user identification
data at a predetermined timing while said user terminal is connected
with said network;

15 distributing said contents with said digital information
being embedded through a predetermined distribution mechanism;

counting a utilization condition of the contents per user
based on the contents utilizing history and the user identification
data gathered through said information gathering means; and

20 determining a charging amount per user based on said counted
utilization condition and a charging rule for said contents.

3. A method for managing fees of contents according to claim
2, further comprising the steps of encrypting the contents to be
25 distributed and issuing key information for decrypting said
encrypted contents, said key information being recorded in said
recording medium.

4. A method for managing fees of contents in which the fees arise
30 based on a predetermined charging rule upon distributing and
utilizing the contents, said method comprising the steps of:

5

allowed to connect;

10

being embedded through a predetermined distribution mechanism;

20

25

30

contents.

5. A method for managing fees of contents according to claim 4, further comprising the step of encrypting the contents to be distributed and issuing key information for decrypting said encrypted contents, said key information being recorded in said recording medium.

6. A system for managing fees of contents in which the fees arise based on a predetermined charging rule upon distributing the contents, said system comprising:

information gathering means provided on a network with which a user terminal is allowed to connect, said user terminal carrying out information processing by utilizing said contents;

distributing means for embedding digital information to said contents, said digital information causing said user terminal to transmit a contents distributing history to said information gathering means at a predetermined timing while said user terminal is connected with said network, and for distributing said contents with said digital information being embedded through a predetermined distribution mechanism;

identification information holding means for holding identification information for identifying said distributed contents and said distribution mechanism;

counting means for counting a distribution condition of contents per distribution mechanism based on said contents distributing history gathered through said information gathering means and said identification information held by said identification information holding means; and

fee calculating means for determining a charging amount per distribution mechanism based on said counted distribution

condition and a charging rule for said contents.

7. A system for managing fees of contents in which the fees arise based on a predetermined charging rule upon utilizing the contents,

5 said system comprising:

issuing means for issuing a recording medium to a user operating a user terminal which carries out information processing by utilizing said contents, said recording medium having a data recording area in which user identification data is recorded and
10 a nonvolatile memory area;

information gathering means provided on a network with which said user terminal with said recording medium being loaded is allowed to connect;

15 distributing means for embedding digital information to said contents, said digital information causing said user terminal to store a contents utilizing history indicating utilizing condition of the contents to said memory area, and to read said stored contents utilizing history so as to transmit said contents utilizing history to said information gathering means along with said user
20 identification data at a predetermined timing while said user terminal is connected with said network, and for distributing said contents with said digital information being embedded through a predetermined distribution mechanism;

25 identification information holding means for holding identification information for identifying said distributed contents;

counting means for counting a utilization condition of the contents per user based on the contents utilizing history and the user identification data gathered through said information
30 gathering means and the identification information held by said identification information holding means; and

9. A computer program for causing a computer system connectable to a network with which a user terminal is allowed to connect, to operate as a fee managing system for managing fees of contents in which the fees arise based on a predetermined charging rule upon distributing the contents, said user terminal executing information processing by utilizing the contents, said computer program causing said fee managing system to comprise:

distributing means for embedding digital information to said contents, said digital information causing said user terminal to transmit a contents distributing history to said information gathering means at a predetermined timing while said user terminal is connected with said network, and for distributing said contents with said digital information being embedded through a predetermined distribution mechanism;

counting means for counting a distribution condition of contents per distribution mechanism based on said contents distributing history gathered through said information gathering

means and said identification information held by said identification information holding means; and

fee calculating means for determining a charging amount per distribution mechanism based on said counted distribution condition and a charging rule for said contents.

10. A computer-readable recording medium recording the computer program according to claim 9.

11. A computer program for causing a computer system connectable to a network with which a user terminal is allowed to connect, to operate as a fee managing system for managing fees of contents, said user terminal loaded with a recording medium having a data recording area for recording user identification data for identifying a user operating said user terminal and a nonvolatile memory area so as to execute information processing by utilizing the contents, said computer program causing said fee managing system to comprise:

information gathering means for gathering information from said network;

distributing means for embedding digital information to said contents, said digital information causing said user terminal to store a contents utilizing history indicating utilizing condition of the contents to said memory area, and to read said stored contents utilizing history so as to transmit said contents utilizing history to said information gathering means along with said user identification data at a predetermined timing while said user terminal is connected with said network, and for distributing said contents with said digital information being embedded through a predetermined distribution mechanism;

identification information holding means for holding

identification information for identifying said distributed contents;

counting means for counting a utilization condition of the contents per user based on the contents utilizing history and the user identification data gathered through said information gathering means and the identification information held by said identification information holding means; and

fee calculating means for determining a charging amount per user based on said counted utilization condition and a charging rule for said contents.

12. A computer-readable recording medium recording the computer program according to claim 11.
